

Sample Collection of Various References

This manual comprises three (separate) parts:

Part 1: Entering Articles in XML

Part 2: Sample Collection of Various References

Part 3: Loading Process, Errata, and Corrections

For any questions and details please ask poa-ejournals@thieme.de.

1	Tagging references	3
1.1	Punctuation.....	3
1.2	Display.....	3
1.3	Reference types.....	3
2	Elements of <bhref>	4
2.1	XML Samples for <bhref>	5
3	Elements of <jhref>	13
3.1	XML Samples for <jhref>	14
4	Elements of <otherref>	20
4.1	XML Samples for <otherref>.....	21
5	Common Errors	24

1 Tagging references

Since the subject of tagging references repeatedly gives rise to confusion and explanations to clarify this need to be provided quickly and unproblematically, this set of examples covers special references as well as those encountered on a regular basis. You can use the examples as a tool to help you with difficult cases. Please inform us if any examples are missing.

In general, the structure of the references will not change as a result of the new schema. The designations of the individual tags will, however change.

1.1 Punctuation

It is important to pay attention to punctuation. Punctuation is generally not part of the tag, but is entered by the system in a number of different ways depending on the reference type. Correct tagging is important to ensure that punctuation is correct and conforms to the Thieme spelling conventions.

Only for a small number of tags is it necessary and advisable to enter the punctuation yourself. For example, in the <txt> tag, you have to enter the punctuation yourself.

No punctuation is entered online at the end of a reference.

1.2 Display

The information is displayed online following the sequence of the tags. Only the author's name is displayed according to a fixed schema (last name, name suffix, first name, second first name).

The system enters spaces between the individual tags.

You can cite references that are not mentioned within the article. In this case, the reference is not assigned a number for display.

1.3 Reference types

In Thieme eJournals, we offer the option of clicking a journal reference <jnref> or a book reference <bkref> and navigating directly to the article (either within Thieme eJournals or with a different provider). This is, however, not possible if this structure (<jnref> und <bkref>) is not adhered to. This may be extended sometime in the future to include other references, e.g. patents.

Element	Explanation
<ref-list>	Surrounds all references of an article
Subelements of <ref-list>	
<label> <title>	Heading for references; optional elements
<comment-ref>	For Subheadings
<jnref>	Citation of a journal
<bkref>	Citation of a book or e-book
<otherref>	Other citation, reference of patent
<ref-list>	Nesting of references, e. g. for groups of literature

Example: list of references with **numbering**:

```
<ref-list>
<title>bibliography</title>
<bkref id="BR687-1" numbering="1">...</bkref>
```

</ref-list>

2 Elements of <bkref>

You tag citations of books or e-books with <bkref>:

Attributes of <bkref>

id="..."	<p>Assigns an ID so that the citation can be referenced.</p> <p>You must assign the ID in line with the number range rule for <bkref>:</p> <p>Citations in books or e-books are labeled using the "BR" prefix.</p> <p>This is followed by a user-defined string of numbers and/or letters.</p> <p>This string must contain a hyphen (e.g. part of manuscript number, hyphen, sequential number).</p> <p>Example: BR283-001</p> <p>You must assign an ID.</p>
numbering="..."	<p>displays the number and/or letter of the reference</p> <p>You can cite references that are not mentioned within the article. In this case, the reference is not assigned a number for display.</p>
Subelements of <bkref>	Explanation
<contrib-group>	Author (cf. manual 1: 2.6)
<ti>	Title of referenced book
<subtitle>	Subtitle
<partof>	Reference to a higher-level source; e.g. "in: Travis, The SGML Implementation Guide"
<txt>	Additional notes that are not covered by the other elements
<ed>	Editor; contains the <contrib-group> subelement
<edition>	Edition
<publisher-loc>	Place of publication
<pubname>	Name of publisher
<date>	Date (cf. manual 1: 2.8)
<serie>	Series; comprises the title of the series (<ti>) and numbering (<volume>)
<uri>	URL
<volume>	Volume number
<ed>	Editor of a serie (e.g. Houben-Weyl)
<isbn>	ISBN of the referenced book or e-book
<doi>	Digital object identifier; optional element
<fpage>	First page of the referenced citation (optional)
<lpage>	Last page of the referenced citation
<crossref-id>	CrossRef ID of a reference
<pubmed-id>	PubMed ID of a reference

4 Elements of <otherref>

You enter other citations that do not originate from books or journals, as well as references to patents, in the <otherref> element:

Attributes of <otherref>

id="..."	<p>Assigns an ID so that the citation can be referenced.</p> <p>You must assign the ID in line with the number range rule for <otherref>:</p> <p>Other citations are labeled using the "OR" prefix.</p> <p>This is followed by a user-defined string of numbers and/or letters. This string must contain a hyphen (e.g. part of manuscript number, hyphen, sequential number).</p> <p>Example: OR283-001</p> <p>You must assign an ID.</p>
numbering="..."	<p>displays the number and/or letter of the reference</p> <p>You can cite references that are not mentioned within the article. In this case, the reference is not assigned a number for display.</p>
Sub elements of <otherref>	Explanation
<contrib-group>	Author (cf. manual 1: 2.6)
<ti>	Title of referenced contribution
<subtitle>	Subtitle of referenced contribution
<patent>	Indicates a patent
<patentnr>	Indicates the patent number
<volume>	Volume number
<ed>	Editor; contains the <contrib-group> subelement
<publisher-loc>	Place of publication
<pubname>	Name of publisher
<date>	Date (cf. manual 1: 2.7)
<uri>	URL
<txt>	Additional notes that are not covered by the other elements
<doi>	Digital object identifier; optional element
<fpage>	First page of the referenced citation
<lpag>	Last page of the referenced citation
<crossref-id>	CrossRef ID of a reference
<pubmed-id>	PubMed ID of a reference

5 Common Errors

A dot within the tag <ti>.

- Online two dots will be displayed. Do not set any punctuation, unless the title needs a special punctuation, e. g. an interrogation mark.

The tag <given-names> contains several initials or names.

- Only one name should be tagged. If there are several first names you'll have to use <middle-name> as well.

Dots within the tag <given-names>.

- The punctuation is done automatically when displaying the reference. An exception is the tag <txt>, e. g. "et al."; a dot is necessary, otherwise it will be missing online.

Supplements are integrated into other tags (<txt>, <issue> ...).

- They have to be placed within <supplement>, always a minimum of two digits, sometimes even three digits.
